Azure Regions

Azure Datacenter

A group of interconnected buildings in the same location that contain all the servers, power, wiring and internet connectivity to run Azure services

Region

A set of datacenters deployed within a latency-defined perimeter and connected through a dedicated regional low-latency network.

60+ Regions 140 Countries

Availability Zones

Unique physical locations within a region. Each zone is made up of one or more datacenters equipped with independent power, cooling, and networking. The physical separation of Availability Zones within a region protects applications and data from datacenter failures. Zone-redundant services replicate your applications and data across Availability Zones to protect from single-points-of-failure. With Availability Zones, Azure offers industry best 99.99% VM uptime SLA.

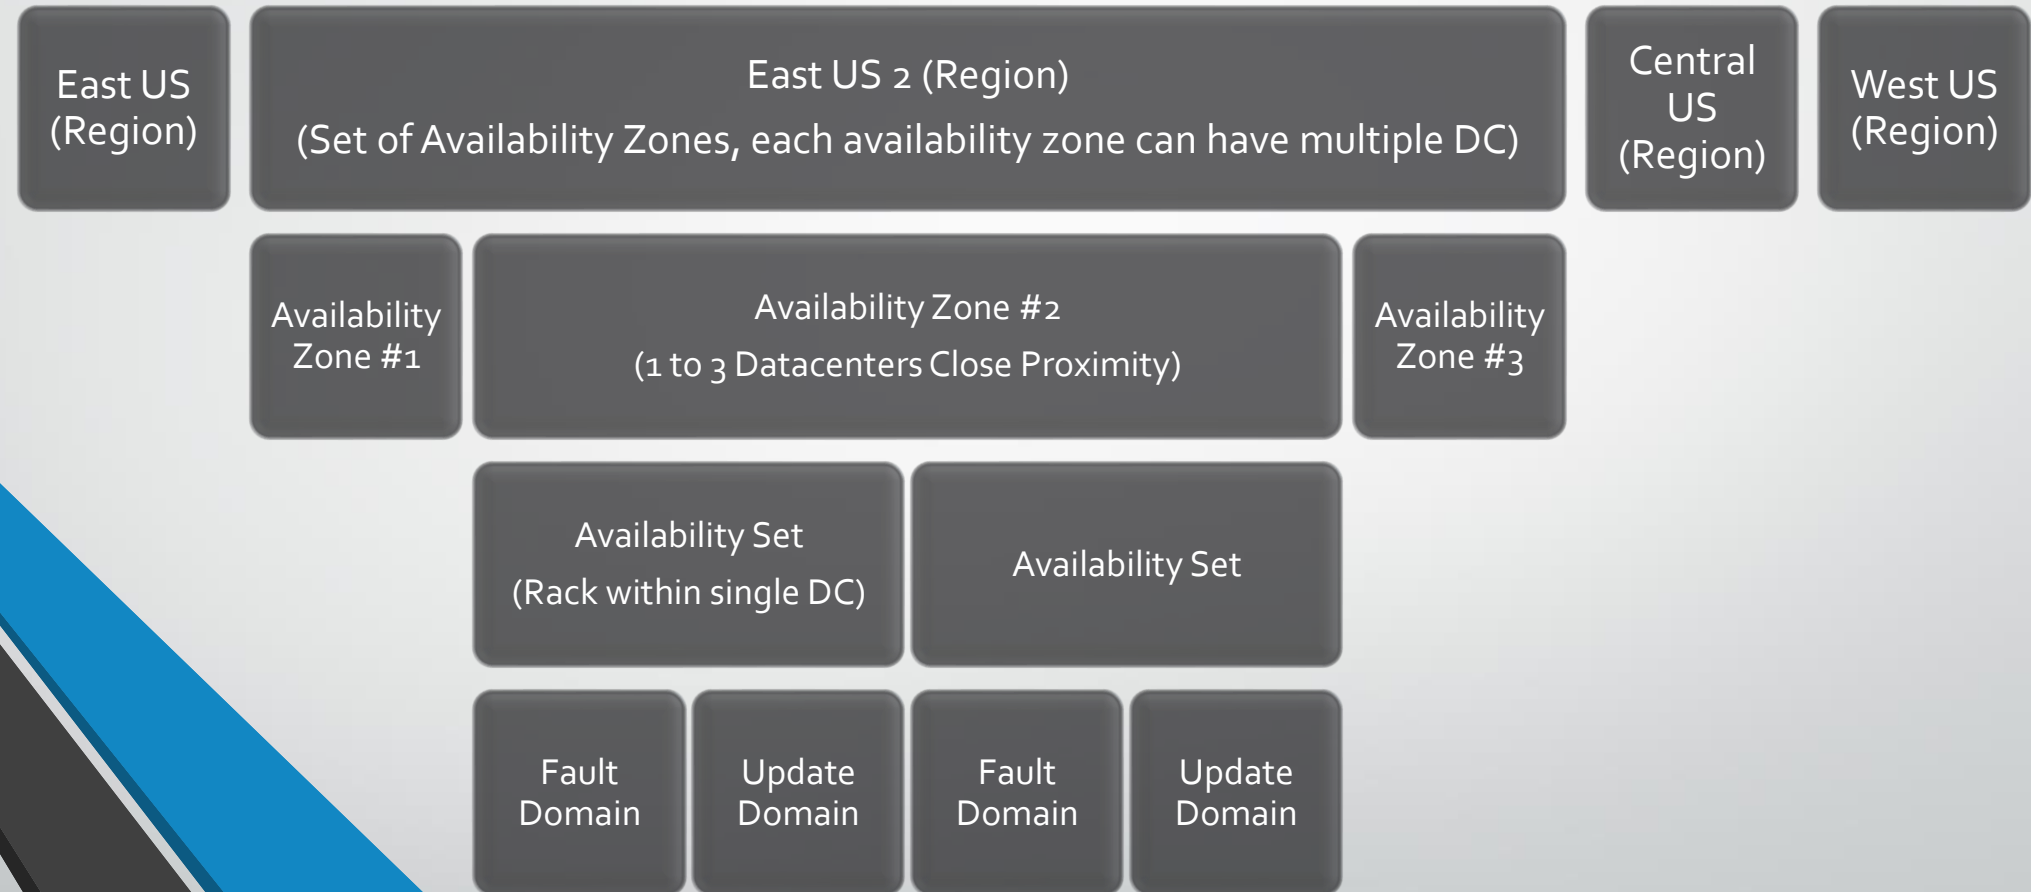

Availability Sets

Group of 2 or more VM's in the same data center, spread over racks. (99.95% VM uptime SLA)

Fault Domain – Server / Rack goes down, unplanned.

Update Domain – Planned maintenance / patching by Microsoft.
